Affiliation(s)

The NFDI4Earth Academy is a network of early career scientists interested in bridging Earth System and Data Sciences beyond institutional borders. The established German research networks Geo.X, Geoverbund ABC/J, and DAM offer an open science and learning environment covering specialized training courses, collaborations within the NFDI4Earth consortium with access to all NFDI4Earth innovations and services. Academy fellows advance their research projects by exploring and integrating new methods and connecting with like-minded scientists in an agile, bottom-up, and peer-mentored community. We support young scientists in developing skills and mindset for open and data-driven science across disciplinary boundaries.

Fellows are joining a two-year program additional to their research project. Events will be virtually and in person at one of the geoscience networks (Geo.X, DAM and Geoverbund ABC/J), and may require travel. The core program includes 3 events per year. Depending on the individual needs of the Fellows, at least three additional events are possible.

☐ I support the applicant in joining the two-year program of NFDI4Earth Academy.

How do you expect the applicant's research/career will benefit from applying Data Sciences,

```

```

How might your research group benefit from the applicants' training in RDM and Data Sciences in the NFDI₄Earth Academy?

```

```
